

1. Site and Organization

KEK consists of four research institutions, i.e., the Institute of Materials Structure Science (IMSS), the Institute of Particle and Nuclear Studies (IPNS), the Accelerator Laboratory (AL), and the Applied Research Laboratory. As shown in Fig. 1, the IMSS constitutes the Synchrotron Radiation Science Divisions I and II, the Neutron Science Division, the Muon Science Division, the Structural Biology Research Center, and the Condensed Matter Research Center. Table I shows a list of the members of the Advisory Committee of the IMSS.

Photon Factory (PF) consists of two divisions of the IMSS (the Synchrotron Radiation Science Divisions I and II) and the Accelerator Division VII of the AL as shown in the organization chart of Fig. 2. The staff members of the PF are listed in Table 2. Synchrotron Radiation Science Divisions I and II consist of five

beamline groups (electronic structure group, condensed matter group, materials chemistry group, life sciences group and slow positron group), two engineering and administration groups (beamline engineering, technical services & safety group and user support & dissemination group) and two working groups (ultrafast dynamics group and advanced detector R&D group). The Accelerator Division VII has six groups, which are named Light Source Group I to VI. The missions of each group are as follows: Group I is in charge of orbits, magnets, and insertion devices, Group II of RF, SC cavities and so on, Group III mainly of vacuum, Group IV mainly of beam diagnostics and accelerator control, Group V of front-end, safety and so on, and Group VI mainly of electron guns.
