ACCELERATORS

1. Outline of the Accelerators ........................................................................................................ 77

2. PF Ring .................................................................................................................................. 81
   2-1 Summary of Machine Operation
   2-2 The Straight-Sections Upgrade Project
   2-3 Low Emittance Operation Study
   2-4 Beam Instability Studies Using a Pulsed Octupole Magnet
   2-5 Measurement of Transverse Quadrupole-Mode Frequencies of an Electron Bunch
   2-6 Polarization Control by a New Arrangement of Undulator Magnets
   2-7 Upgrade of the Photon Factory Computer System

3. PF-AR .................................................................................................................................. 91
   3-1 Summary of Machine Operation
   3-2 3-GeV Injection
   3-3 Orbit Stabilization
   3-4 Vacuum System
   3-5 Temperature Control in the Ring Tunnel
   3-6 Transverse Sawtooth Instability
   3-7 Bunch Lengthening and the Impedance of Vacuum Components
   3-8 Detection of the Wake Field Using the Test-Bunch Method
   3-9 Construction of SR Monitor
   3-10 Two New In-Vacuum Type Undulators
