Highlights
1. Atomic and Molecular Science ................................................................. 5
   1-1 Shape-Resonance-Enhanced Vibrational Effects in the Angular Distributions of C 1s Photoelectrons from Fixed-in-Space CO Molecules

2. Chemistry ................................................................................................. 6
   2-1 A New Metastable Photoinduced Phase of Cu(II) Complexes Studied by XAFS
   2-2 Novel Crystal Growth from Titania Nanosheets Studied by Total Reflection Fluorescence XAFS
   2-3 Charge-Discharge Reaction Mechanism of High Capacity Oxide-Anode-Materials for Li Secondary Battery

3. Surfaces and Interfaces .............................................................................. 10
   3-1 A Structural Study of the Si(111)$\sqrt{3}\times\sqrt{3}$-Ag Surface at Low Temperature by X-Ray Diffraction
   3-2 An Angle-Resolved Photoemission Study of the Near Surface Electronic Structure of Cr(001)
   3-3 Metal-Induced Gap States at Well Defined Alkali-Halide/Metal Interfaces
   3-4 Structure of Methylthiolate Adsorbed on Au(111) Studied by Photoelectron Diffraction

4. Electronic Structure of Condensed Matter ............................................... 15
   4-1 High-Throughput Characterization of the Surface Electronic Structure of Singly-Correlated Transition Metal Oxide Thin Films Using in-situ Photoemission Spectroscopy
   4-2 Extraction of a Replicative Multi-Electron Contribution to XANES Spectra by Comparative Soft X-Ray Absorption and Emission Spectroscopy
   4-3 Half-Metallic Density of States in Sr$_2$FeMoO$_6$ Observed by Photoemission Spectroscopy

5. Materials Science ...................................................................................... 19
   5-1 A New Experimental Technique Using Resonant X-Ray Scattering; Observation of Ferro-Type Orbital Ordering and Elucidation of its Scattering Mechanism
   5-2 Quantum Phase Transition in DMTTF-Q$_x$ ($x$=Cl, Br)
   5-3 Anisotropic Resonant X-Ray Scattering from Antiferromagnet Hematite, Fe$_2$O$_3$

6. Crystallography ........................................................................................ 23
   6-1 How Does the Accuracy of a Continuous Phase Transition Temperature Depend on the Angular Resolution of a Powder Diffractometer?
   6-2 Structure Determination of Spinel-Type CuIr$_2$S$_4$ at Low Temperature from High-Resolution Powder Diffraction Data

7. High Pressure Science ............................................................................. 26
   7-1 Precise Measurement of Equation-of-State and Elastic Properties for GaN up to 16 GPa
   7-2 High-Pressure Powder X-Ray Diffraction Experiments on Zn at Low Temperature
   7-3 A High Pressure and High Temperature in situ X-Ray Diffraction Study on FeO under Lower Mantle Conditions

8. Biological Science .................................................................................... 30
   8-1 Molecular Mechanism of the Membrane Recruitment of GGA by ARF in Lysosomal Protein Transport
   8-2 Structure of the Protein-Degradation Mediating Mammalian 20S Proteasome
   8-3 A Novel Interacting Mechanism between Mammalian Protein Phosphatase 1 and Its Inhibitor Calyculin A
   8-4 The Molecular Mechanism of Plasmodium Wound Healing, Triggered by Ca$^{2+}$ Binding Protein 40, CBP40
   8-5 A Novel Intramolecular Covalent Bond Found in Catalase-Peroxidase
   8-6 Crystal Structure of the First Natural Diels-Alderase, Macrophomate Synthase
   8-7 Crystal Structures of the Reaction Intermediate and its Homologue of an Extradiol-Cleaving Catechol Dioxygenase
   8-8 A Directed Evolution Approach to a Structural Genomics Project: Rv2002 from Mycobacterium tuberculosis
   8-9 Equilibrium and Kinetics of the Allosteric Transition of the Chaperonin GroEL Studied by Solution X-Ray Scattering
   8-10 Light-Induced Conformational Change of Photoactive Yellow Protein
   8-11 Energy Transducing Conformation Changes of Myosin Motor Proteins

9. Applied Science ....................................................................................... 43
   9-1 XANES Study of Tribofilms Generated from Continuously Variable Transmission Fluids
   9-2 Corrosion Protection of Steel by "Protective Rusts"

10. Instrumentation and Technique .............................................................. 46
    10-1 Magnetic Domain Imaging by Photoelectron Emission Microscopy
    10-2 Resolution-Tunable Refraction-Constant X-Ray imaging
