

# *Experimental Facilities*

## New irradiation system

Dish used for irradiation

Fluorescence microscope

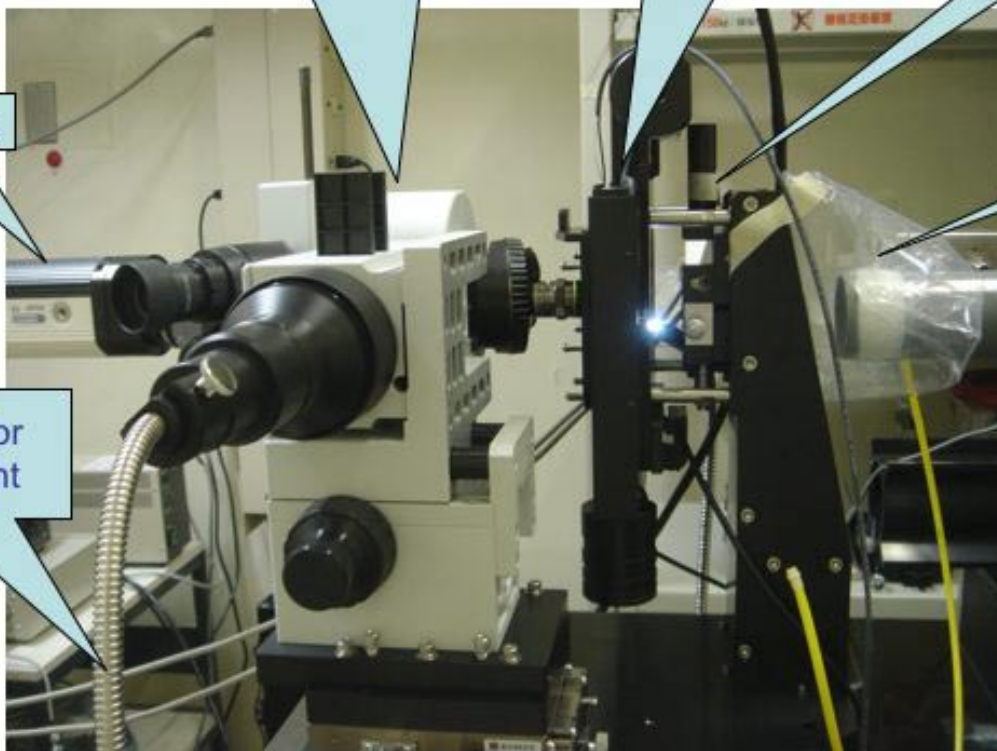

Motorized stage

Slit system

CCD camera

He guide

Optical fiber for excitation light

# EXPERIMENTAL FACILITIES

---

<b>1. Newly Developed Experimental Facilities</b> .....	<b>63</b>
1-1 Overview	
1-2 Reconstruction of BL-3A, 3B, 3C, 6B, 6C and 16A	
1-3 The New Short-Gap Undulator Beamline BL-3A for Structural Materials Science	
1-4 A Fast Polarization-Switching Beamline for Spectroscopic Studies in the Soft X-Ray Energy Region	
1-5 Commissioning of a New Branch Beamline BL-28B	
1-6 AR-NE3A: A Protein Crystallography Beamline for Pharmaceutical Research	
1-7 AR-NW14A: A Beamline for Time-Resolved X-Ray Research	
<b>2. Newly Developed Experimental Systems</b> .....	<b>69</b>
2-1 An Energy-Tunable X-Ray Microbeam Irradiation System for Radiobiology	
<b>3. Structural Biology Research Center</b> .....	<b>70</b>
3-1 Introduction	
3-2 Protein 3000 Project — Individual Analysis Programs —	
3-3 Highlights on In-House Structural Biology Research	
3-4 Beamline and Robotics	
3-5 A New Measurement System for Protein Crystallography Combined with the Development of a Next-Generation X-Ray Area Detector	
<b>4. Slow Positron Facility</b> .....	<b>76</b>
4-1 Research and Development of Transmission Positron Microscope	
4-2 Scientific Achievements at the Slow Positron Facility	
<b>5. ERATO Non-Equilibrium Dynamics Project</b> .....	<b>79</b>
5-1 Outline	
5-2 Research Subjects	
5-3 Beamline Development	
<b>6. Summary of Experimental Stations</b> .....	<b>80</b>
