

# *Experimental Facilities*

# EXPERIMENTAL FACILITIES

---

|  |            |
|--|------------|
| <b>1. Newly Developed Experimental Facilities</b> .....  | <b>83</b>  |
| 1-1 Overview   |            |
| 1-2 BL-16A: A Variable Polarization Beamline for Soft X-Ray Spectroscopy   |            |
| 1-3 AR-NE1A: A New Beamline for High-Pressure Experiments Combining X-Ray Diffraction and Mössbauer Spectroscopy |            |
| 1-4 AR-NE3A: A Protein Crystallography Beamline for Pharmaceutical Applications                                  |            |
| <b>2. Newly Developed Experimental Systems</b> .....   | <b>88</b>  |
| 2-1 Development and Applications of an Apparatus for Soft X-Ray Resonant Magnetic Scattering                     |            |
| 2-2 Introduction of an X-Ray Phase Plate to the Wavelength-Dispersive Spectrometer at AR-NW2A                    |            |
| 2-3 Commissioning of Resonant Scattering Equipment for Use in the Soft X-Ray Energy Region                       |            |
| <b>3. Structural Biology Research Center</b> .....   | <b>92</b>  |
| 3-1 Overview   |            |
| 3-2 Target Proteins Research Program   |            |
| 3-3 Highlights on In-House Structural Biology Research   |            |
| 3-4 Beamline for Protein Crystallography   |            |
| 3-5 Robotics for Structural Biology  |            |
| <b>4. Establishment of Condensed Matter Research Center at the IMSS</b> .....                                    | <b>99</b>  |
| <b>5. The ERATO Non-Equilibrium Dynamics Project</b> .....   | <b>100</b> |
| 5-1 Outline  |            |
| 5-2 Beamline Construction and Development  |            |
| 5-3 100 ps Time-Resolved X-Ray Applications  |            |
| <b>6. The Slow Positron Facility</b> .....   | <b>101</b> |
| 6-1 Overview   |            |
| 6-2 Development of a Transmission Positron Microscope  |            |
| <b>7. Summary of Experimental Stations</b> .....   | <b>102</b> |
