Experimental Facilities
# EXPERIMENTAL FACILITIES

1. Newly Developed Experimental Facilities ................................................................. 77
   1-1 Overview
   1-2 BL-1A: A Newly Constructed Beamline, BL-1A
   1-3 BL-8A: A New Beamline for Structural Materials Science
   1-4 BL-13A: Vacuum Ultraviolet / Soft X-Ray Undulator Beamline for the Study of Organic Thin Films and Biomolecules Adsorbed on Surfaces
   1-5 AR-NE1A for High-Pressure Experiment Combining X-Ray Diffraction and Mössbauer Spectroscopy
   1-6 Construction of NE7A and Rearrangement of BL-14C for X-Ray Imaging and X-Ray Diffraction Experiments under High Pressure and Temperature

2. Newly Developed Experimental Systems ................................................................ 84
   2-1 New Wide-Area Two-Dimensional Detector System for SAXS Experiments at BL-10C

3. Structural Biology Research Center ........................................................................ 86
   3-1 Overview
   3-2 Target Proteins Research Program
   3-3 Highlights on In-House Structural Biology Research
   3-4 Beamline for Bio-Macromolecular Crystallography
   3-5 Homage for BL-6A

4. Condensed Matter Research Center ....................................................................... 92

5. The Slow Positron Facility ..................................................................................... 94
   5-1 Overview
   5-2 Development of an Apparatus for the Study of Photodetachment of Positronium Negative Ions

6. Summary of Experimental Stations ......................................................................... 95
