

Experimental Facilities

EXPERIMENTAL FACILITIES

1. Newly Developed Experimental Facilities	79
1-1 Overview	
1-2 BL-1A: A Long-Wavelength Macromolecular Crystallography Beamline	
1-3 BL-6A: Reconstruction for Small Angle X-Ray Scattering Beamline	
1-4 BL-13A: A New Vacuum Ultraviolet and Soft X-Ray Undulator Beamline for the Study of Organic Thin Films Adsorbed on Surfaces	
1-5 BL-16A: Development of Fast Polarization Switching	
2. Structural Biology Research Center	85
2-1 Overview	
2-2 Target Proteins Research Program (FY2007-2011)	
2-3 Highlights on In-House Structural Biology Research	
2-4 Beamline and Technology Developments for Macromolecular Crystallography	
3. Condensed Matter Research Center	92
4. The Slow Positron Facility	95
4-1 Overview	
4-2 Increase in the Beam Intensity by Modification of the Slow Positron Production Unit	
4-3 Photodetachment of the Positronium Negative Ion (Ps ⁻)	
4-4 Installation of RHEPD Station and First Data	
5. IMSS Instrument R&D Team	97
6. Summary of Experimental Stations	98
